Safety and Care Advice

General care and maintenance

Only clean using a damp cloth and mild detergent, do not use bleach or abrasive cleaners.

If your furniture becomes stained, scratched, chipped or suffers other damage we would recommend professional help is sought to restore it.

From time to time check that there are no loose screws on this unit.

Cleaning and care of wood surface

We would recommend that you protect this furniture from spills - any spillage should be removed immediately to avoid staining by using a damp cloth, then wiping dry the surface with a clean dry duster. Repeat this procedure for periodic cleaning. The use of furniture polishes or sprays is not necessary or recommended.

Wood is a beautiful natural material. It is important to understand its unique properties which should not be mistaken for flaws.

Each piece will have a slightly different grain pattern. Variation in colour, shading and grain between different products and within the same product can occur. This is a normal feature of all natural wood furniture.

Take care when moving furniture, dragging pieces across the floor will damage the joints.

Take care to prevent sharp objects e.g. toys, buckles and heels from coming into contact with your furniture, and avoid contact with

chemicals e.g. cosmetics or hair products which may permanently mark the surface.

Use coasters to protect the surface from moisture and heat.

Avoid exposing your furniture to direct and prolonged periods of sunlight and heat sources as fading or cracking may result.

Cleaning and care of metal elements

We give below some suggestions for metal furniture care.

Dust regularly to avoid dirt build-up. Dust can cause the surface to pit.

Repair damaged surfaces immediately to prevent the metal underneath from rusting.

WARNING

Don't use harsh abrasives to clean any metal surfaces.

Do not allow spillages to stay on the surface for long.

Do not clean with products containing the following: - Acetone (e.g. nail varnish remover), Ammonia

(e.g. bleach) or sodium hydroxide (e.g. Caustic soda and oven cleaners).

Don't use indoor furniture outside. Continual exposure in a damp or wet environment will cause corrosion.
